

Model 100 Modular Assembly

Model 100 Indicator Light assemblies are a modular concept that provides low cost and great versatility. These lights mount by means of a rubber bushing snapped into a 9 mm diameter panel cutout. There is no need for nuts or washers. Incandescent, neon, green glow, and LED light sources are available. All fit directly into the bushing. All color selections of lens assemblies are slipped in from the top. The 100 model's great advantage is that the lens assembly may be mounted independently from the light source and mated in the final assembly stage. Lens' colors or light sources may be interchanged at any time.
